JOURNAL OF AIRCRAFT
Vol. 29, No. 6, Nov.–Dec. 1992

1992 *Journal of Aircraft* Index

How to Use the Index

In the Subject Index, pages 1145–1150 each technical paper is listed under a maximum of three appropriate headings. Note the number in boldface type following each paper title, and use that number to locate the paper in the Chronological Index. The Author Index, pages 1151–1152, lists all authors associated with a given technical paper. The locating numbers are identical to those in the Subject Index. The Chronological Index, pages 1153–1159, lists all papers by their unique code numbers. This listing contains titles, authors and their affiliations, and volume, issue number, and page where the paper appeared. It also gives the AIAA paper number, if any, on which the article was based, as well as the "CP" or conference volume number if the paper was published in a bound collection of meetings papers. Comments, Replies, and Errata are listed directly beneath the paper to which they refer. If the paper to which they refer was published prior to 1992, that paper also will appear in both the Subject and Chronological Indexes. Authors of Comments also are listed in the Author Index.

Subject Index

Aircraft Technology, Conventional, STOL/VTOL

Aerodynamics

Buffet Excitation of Wings at Low Speeds C92-182
Transonic Low-Reynolds Number Airfoils C92-178
Wind-Tunnel Investigation of a Fighter Model at High Angles of Attack C92-176
Sources of High Alpha Vortex Asymmetry at Zero Sideslip C92-175
Multigrid Euler Calculations over Complete Aircraft C92-174
Aerodynamic Shape Design and Optimization: Status and Trends C92-165
Improved Calculation of Transonic Potential Flow Past Swept Wings C92-154
Flight Measurements of Downwash on the Ball-Bartoe Jetwing Powered Lift Aircraft C92-149
Application of Computational Fluid Dynamics to Sonic Boom Near- and Mid-Field Prediction C92-148
Small Two-Dimensional Surface Excrescences on Aircraft Wings Approaching Separation C92-145
Viscous Flow Simulation of a Fighter Aircraft C92-143
Two-Fence Concept for Efficient Trapping of Vortices on Airfoils C92-140
Euler/Experiment Correlation of a Generic Fighter C92-139
Navier-Stokes Simulation of a Close-Coupled Canard-Wing-Body Configuration C92-138
Forcing Level Effects of Internal Acoustic Excitation on the Improvement of Airfoil Performance C92-137
Direct Simulation of Low-Density Flow over Airfoils C92-134
Effect of Nose-Boom on Forebody Vortex Flow C92-122
Thin-Airfoil Correction for Panel Methods C92-115
Pitch Rate/Sideslip Effects on Leading-Edge Extension Vortices of an F/A-18 Aircraft Model C92-114
Minimizing Supersonic Wave Drag with Physical Constraints at Design and Off-Design Mach Numbers C92-112
Optimum Cruise Lift Coefficient in Initial Design of Jet Aircraft C92-110
Time-Average Loading on a Two-Dimensional Airfoil in Large Amplitude Motion C92-109
Unsteady Crossflow on a Delta Wing Using Particle Image Velocimetry C92-108
Self-Induced Roll Oscillations of Low-Aspect-Ratio Rectangular Wings C92-106
Forebody Vortex Control Using Small, Rotatable Strakes C92-102
Design Load Predictions on a Fighter-Like Aircraft Wing C92-101
Simulation of Transonic Flow over Twin-Jet Transport Aircraft C92-097
Flight Deck Aerodynamics of a Nonaviation Ship C92-094
Aerodynamic Forces on Noncircular Cross-Section Missile Forebodies C92-093
Experimental Study of Vortex Flows over Delta Wings in Wing-Rock Motion C92-091
Prediction of Inviscid Supersonic/Hypersonic Aircraft Flowfields C92-089
Navier-Stokes Predictions for the F-18 Wing and Fuselage at Large Incidence C92-087
Establishing a Database for Flight in the Wakes of Structures C92-086
Flow over a Twin-Tailed Aircraft at Angle of Attack, Part II: Temporal Characteristics C92-085
Accurate Prediction of Drag Using Euler Methods C92-077
Effect of Thrust Vectoring on Level-Turn Performance C92-074
Improved Measurement of the Dynamic Loads Acting on Rotating Parachutes C92-067
Downwash for Joined-Wing Airframe with Control Surface Deflections C92-066
Wake Effects on the Prediction of Transonic Viscous Flows Around Airfoils C92-063
Drag Reduction of Bluff Bodies Through Momentum Injection C92-062
Flow over a Twin-Tailed Aircraft at Angle of Attack Part I: Spatial Characteristics C92-060
Prediction of Vortex Shedding from Forebodies with Chines C92-059
Identification of the Transfer Function Between Turbulence and Aircraft C92-057
Extension and Validation of an Unsteady Wake Model for Rotors C92-055
Unsteady Aerodynamic Loading Produced by a Sinusoidally Oscillating Delta Wing C92-054
Design Optimization of Natural Laminar Flow Bodies in Compressible Flow C92-050
Design and Development of a Compressible Dynamic Stall Facility C92-046
Data Analysis for Unsteady Turbulence Measurements over Airfoils C92-045
Analysis of Airship Lateral Maneuverability C92-043
Subsonic and Transonic Low-Reynolds-Number Airfoils with Reduced Pitching Moments C92-042
Use of Shear-Sensitive Liquid Crystals for Surface Flow Visualization C92-040
Controlled Opening Method for Clustered Parachutes C92-037
Ground-Testing Techniques for Tethered Systems C92-035
Navier-Stokes Methods to Predict Circulation Control Airfoil Performance C92-034
Experimental Study of a Low Reynolds Number Tandem Airfoil Configuration C92-032
Numerical Computation of Improved Transonic Potential Method C92-025
Transonic Aeroelasticity Analysis Using State-Space Unsteady Aerodynamic Modeling C92-022
Separation Control Using Moving Surface Effects: A Numerical Simulation C92-019
Suppression of the Wing-Body Junction Vortex by Body Surface Suction C92-017
Correction of Sideslip-Induced Static Pressure Errors in Flight-Test Measurements C92-016
Rapid Prediction of High-Alpha Unsteady Aerodynamics of Slender-Wing Aircraft C92-012
Navier-Stokes Calculations of Inboard Stall Delay Due to Rotation C92-010
Hot Gas Environment Around STOVL Aircraft in Ground Proximity—Part 1: Experimental Study C92-009
Efficient Panel Method for Vortex Sheet Roll-Up C92-004
Minimum Induced Drag for Wings with Spanwise Camber C90-108

Aeroelasticity and Aeroservoelasticity

Demonstration of Structural Optimization Applied to Wind-Tunnel Model Design C92-156
Flutter and Stall Response of a Helicopter Blade with Structural Nonlinearity C92-153
Multidisciplinary Optimization of Aeroservoelastic Systems Using Reduced-Size Models C92-151
Dynamic Analysis of Rotor Blades with Root Retention Design Variations C92-131
Aeroelastic Effects of Spoiler Surfaces on a Low-Aspect-Ratio Rectangular Wing C92-129
Design Load Predictions on a Fighter-Like Aircraft Wing C92-101
Navier-Stokes Computations on Swept-Tapered Wings, Including Flexibility C92-090
Structural and Aerodynamic Data Transformation Using Inverse Isoparametric Mapping C92-073
Coalescence of Aeroelastic Modes in Flutter Analysis C92-072
Transonic Aeroelasticity Analysis for Rotor Blades C92-069
Application of Active Flexible Wing Technology to the Agile Falcon C92-064
Extension and Validation of an Unsteady Wake Model for Rotors C92-055
Dynamics of an Optimized Rotor Blade at Off-Design Flight Conditions C92-041
Integrated Aeroelastic Control Optimization of Laminated Composite Lifting Surfaces C92-039
Transonic Aeroelasticity Analysis Using State-Space Unsteady Aerodynamic Modeling C92-022
Nonlinear Flutter of Two-Dimensional Simply Supported Symmetric Composite Laminated Plates C92-020
NASA Investigation of a Claimed 'Overlap' between Two Gust Response Analysis Methods C90-105
Canard-Wing Interaction in Unsteady Supersonic Flow C89-155

Aerospace Plane

Acoustic Testing of High-Temperature Panels C92-181

Numerical Simulation of Re-Entry Flow Around the Space Shuttle with Finite-Rate Chemistry C92-169

Civil Missions and Transportation

Preliminary Sizing Methodology for Hypersonic Vehicles C92-024
On the Threshold—The Outlook for Supersonic and Hypersonic Aircraft C92-002

Communication and Air Traffic Control

Microwave Landing System Modeling with Application to Air Traffic Control Automation C92-051

Configuration Design

Optimized Scramjet Integration on a Waverider C92-179
Aerodynamic Shape Design and Optimization: Status and Trends C92-165
Wing Mass Formula for Twin Fuselage Aircraft C92-146
Application of Advanced Multidisciplinary Analysis and Optimization Methods to Vehicle Design Synthesis C92-135
Minimizing Supersonic Wave Drag with Physical Constraints at Design and Off-Design Mach Numbers C92-112
Optimum Cruise Lift Coefficient in Initial Design of Jet Aircraft C92-110
Downwash for Joined-Wing Airframe with Control Surface Deflections C92-066
Design Optimization of Natural Laminar Flow Bodies in Compressible Flow C92-050
On the Threshold—The Outlook for Supersonic and Hypersonic Aircraft C92-002

Deceleration Systems

Nine-Degree-of-Freedom Simulation of Rotating Parachute Systems C92-130
Improved Measurement of the Dynamic Loads Acting on Rotating Parachutes C92-067
Controlled Opening Method for Clustered Parachutes C92-037
Self-Compensating Carrier Aircraft Recovery System C92-029

Economics

Software Reliability for Flight Crew Training Simulators C92-052

Flight Mechanics

Unsteady Wind-Tunnel Interference in Aircraft Dynamic Experiments C92-180
Escape Strategies for Turboprop Aircraft in Microburst Windshear C92-126
Optimization of Constant Altitude—Constant Airspeed Flight of Turbojet Aircraft C92-119
Wing Design for Hanggliders Having Minimum Induced Drag C92-118
Reconstruction of Flight Path in Turbulence C92-081
Effect of Thrust Vectoring on Level-Turn Performance C92-074
Fighter Agility Metrics, Research and Test C92-065
Agility as a Contributor to Design Balance C92-005

Flight Operations

Flight Deck Aerodynamics of a Nonaviation Ship C92-094

Fuels and Fuel Systems

Thermal Management for a Mach 5 Cruise Aircraft Using Endothermic Fuel C92-056

General Aviation

Model Flight Tests of a Spin-Resistant Trainer Configuration C92-133
Wing Mass Formula for Subsonic Aircraft C92-116
Effect of Wind Shear on Airspeed During Airplane Landing Approach C92-033

Landing Dynamics

Analytical Modeling of SH-2F Helicopter Shipboard Operation C92-142
Self-Compensating Carrier Aircraft Recovery System C92-029

Lighter-Than-Air-Systems

Analysis of Airship Lateral Maneuverability C92-043

Man/Machine Interface

Expert System for Real-Time Aircraft Monitoring C92-011

Military Missions

Advanced Pneumatic Impulse Ice Protection System (PIIP) for Aircraft C92-111
Maximizing Thrust-Vectoring Control Power and Agility Metrics C92-098
Establishing a Database for Flight in the Wakes of Structures C92-086
Agility as a Contributor to Design Balance C92-005
On the Threshold—The Outlook for Supersonic and Hypersonic Aircraft C92-002

Noise

Sonic Boom Environment Under a Supersonic Military Operating Area C92-172
Effects of Fuselage Boundary Layer on Noise Propagation from Advanced Propellers C92-163
Mitigation of Pressure Oscillations Induced by Supersonic Flow over Slender Cavities C92-162
Ground Impingement Noise of Supersonic Jets from Nozzles with Various Exit Geometries C92-161
Application of Computational Fluid Dynamics to Sonic Boom Near- and Mid-Field Prediction C92-148
Experimental Study of Noise Generation and Propagation in a Turbofan Model C92-144
Evaluation of Discrete Frequency Sound in Closed-Test-Section Wind Tunnels C92-127
Noise of Two High-Speed Model Counter-Rotation Propellers at Takeoff/Approach Conditions C92-103
Structure-Borne Noise Transmission in the Propfan Test Assessment Aircraft C92-071

Performance

Wing Mass Formula for Twin Fuselage Aircraft C92-146
Optimization of Constant Altitude—Constant Airspeed Flight of Turbojet Aircraft C92-119
Flight Model for Unmanned Simulated Helicopters C92-080
Effect of Thrust Vectoring on Level-Turn Performance C92-074
Fighter Agility Metrics, Research and Test C92-065
Control Strategy for Maximizing Reconnaissance Range of Hypersonic Cruise Vehicles C92-053
Effects of Higher Harmonic Control on Rotor Performance and Control Loads C92-049
Dynamics of an Optimized Rotor Blade at Off-Design Flight Conditions C92-041
Agility as a Contributor to Design Balance C92-005

Powerplant Integration

Optimized Scramjet Integration on a Waverider C92-179
Whirl-Flutter Stability of a Pusher Configuration in Nonuniform Flow C92-117

Propeller and Rotor Systems

Propeller Slip-Stream Model in Subsonic Linearized Potential Flow C92-177
Effects of Fuselage Boundary Layer on Noise Propagation from Advanced Propellers C92-163
Dynamic Analysis of Rotor Blades with Root Retention Design Variations C92-131
Whirl-Flutter Stability of a Pusher Configuration in Nonuniform Flow C92-117
Noise of Two High-Speed Model Counter-Rotation Propellers at Takeoff/Approach Conditions C92-103
Predicted Pressure Distribution on a Prop-Fan Blade Through Euler Analysis C92-095
Structure-Borne Noise Transmission in the Propfan Test Assessment Aircraft C92-071
Compact Dynamometer System That Can Accurately Determine Propeller Performance C92-001

Rotorcraft

Spinning Mode Analysis of the Acoustic Field Generated by a Turboshaft Engine C92-173
Flutter and Stall Response of a Helicopter Blade with Structural Nonlinearity C92-153
Dynamic Analysis of Rotor Blades with Root Retention Design Variations C92-131
Approach for Analysis and Design of Composite Rotor Blades C92-105
Flight Deck Aerodynamics of a Nonaviation Ship C92-094
Flight Model for Unmanned Simulated Helicopters C92-080
Transonic Aeroelasticity Analysis for Rotor Blades C92-069
Extension and Validation of an Unsteady Wake Model for Rotors C92-055
Effects of Higher Harmonic Control on Rotor Performance and Control Loads C92-049
Navier-Stokes Calculations of Inboard Stall Delay Due to Rotation C92-010

Safety

Escape Strategies for Turboprop Aircraft in Microburst Windshear C92-126
Advanced Pneumatic Impulse Ice Protection System (PIIP) for Aircraft C92-111
Range, Energy, Heat of Motion in the Modified NBC, Anti-g, Tank Suit C92-099
Effects of Ambient Turbulence on the Decay of a Trailing Vortex Wake C92-036
Effect of Wind Shear on Airspeed During Airplane Landing Approach C92-033

Heat Transfer on Accreting Ice Surfaces C92-015
Forward-Look Wind-Shear Detection for Microburst Recovery C92-008

Simulation

Compensating Lags in Head-Coupled Displays Using Head Position Prediction and Image Deflection C92-171
Flight Model for Unmanned Simulated Helicopters C92-080
Robust Flight Reconstruction for Helicopter Simulation and Training C92-061
Software Reliability for Flight Crew Training Simulators C92-052
Self-Compensating Carrier Aircraft Recovery System C92-029
Forward-Look Wind-Shear Detection for Microburst Recovery C92-008

STOL/VTOL/STOVL

Ground Impingement Noise of Supersonic Jets from Nozzles with Various Exit Geometries C92-161
Flight Measurements of Downwash on the Ball-Bartoe Jetwing Powered Lift Aircraft C92-149
Navier-Stokes Methods to Predict Circulation Control Airfoil Performance C92-034
Evaluation of a Navier-Stokes Prediction of a Jet in a Crossflow C92-026
Hot Gas Environment Around STOVL Aircraft in Ground Proximity—Part 1: Experimental Study C92-009
Hot Gas Environment Around STOVL Aircraft in Ground Proximity—Part 2: Numerical Study C92-003

Structural Design (Including Loads)

Demonstration of Structural Optimization Applied to Wind-Tunnel Model Design C92-156
Coining of Holes in Aluminum Plates: Finite Element Simulations and Experiments C92-152
Multidisciplinary Optimization of Aeroservoelastic Systems Using Reduced-Size Models C92-151
Wing Mass Formula for Twin Fuselage Aircraft C92-146
Wing Mass Formula for Subsonic Aircraft C92-116
Characteristic Differences Between the Modal Parameters of Cast and Forged Structures C92-076
Composite Material Repairs to Metallic Airframe Components C92-068
NASA Investigation of a Claimed 'Overlap' between Two Gust Response Analysis Methods C90-105

Structural Materials

Characteristic Differences Between the Modal Parameters of Cast and Forged Structures C92-076

Testing, Flight and Ground

Unsteady Wind-Tunnel Interference in Aircraft Dynamic Experiments C92-180
Three-Dimensional Simulation of Electrothermal Deicing Systems C92-167
Flight Measurements of Downwash on the Ball-Bartoe Jetwing Powered Lift Aircraft C92-149
High Angle-of-Attack Flush Airdata Sensing System C92-147
Model Flight Tests of a Spin-Resistant Trainer Configuration C92-133
Evaluation of Discrete Frequency Sound in Closed-Test-Section Wind Tunnels C92-127
Wind-Tunnel Compressor Stall Monitoring Using Neural Networks C92-121
Unsteady Crossflow on a Delta Wing Using Particle Image Velocimetry C92-108
Airdata Calibration Techniques for Measuring Atmospheric Wind Profiles C92-096
Remote Measurements of Supercooled Integrated Liquid Water During WISP/FAA Aircraft Icing Program C92-092
Flow over a Twin-Tailed Aircraft at Angle of Attack, Part II: Temporal Characteristics C92-085
Calibration-Related Pseudo-Reynolds Number Trends in Transonic Wind Tunnels C92-084
Structure-Borne Noise Transmission in the Propfan Test Assessment Aircraft C92-071
Fighter Agility Metrics, Research and Test C92-065
Flow over a Twin-Tailed Aircraft at Angle of Attack Part I: Spatial Characteristics C92-060
Software Reliability for Flight Crew Training Simulators C92-052
Ground-Testing Techniques for Tethered Systems C92-035
Correction of Sideslip-Induced Static Pressure Errors in Flight-Test Measurements C92-016

Vibration

Mitigation of Pressure Oscillations Induced by Supersonic Flow over Slender Cavities C92-162
Characteristic Differences Between the Modal Parameters of Cast and Forged Structures C92-076
Effects of Higher Harmonic Control on Rotor Performance and Control Loads C92-049

Weather Hazards

Assessment of Microburst Models for Downdraft Estimation C92-168
Predicting Droplet Impingement on Yawed Wings C92-155
Escape Strategies for Turboprop Aircraft in Microburst Windshear C92-126
Advanced Pneumatic Impulse Ice Protection System (PIIP) for Aircraft C92-111
Assessment of One-Dimensional Icing Forecast Model Applied to Stratiform Clouds C92-107
Remote Measurements of Supercooled Integrated Liquid Water During WISP/FAA Aircraft Icing Program C92-092
Aircraft-Triggered Lightning: Processes Following Strike Initiation that Affect Aircraft C92-088
Hazard Evaluation and Operational Cockpit Display of Ground-Measured Windshear Data C92-047
Forward-Look Wind-Shear Detection for Microburst Recovery C92-008
NASA Investigation of a Claimed 'Overlap' between Two Gust Response Analysis Methods C90-105

Energy

Rotating Machinery

Compact Dynamometer System That Can Accurately Determine Propeller Performance C92-001

Fluid Dynamics

Aeroacoustics

Sonic Boom Environment Under a Supersonic Military Operating Area C92-172
Mitigation of Pressure Oscillations Induced by Supersonic Flow over Slender Cavities C92-162
Ground Impingement Noise of Supersonic Jets from Nozzles with Various Exit Geometries C92-161
Experimental Study of Noise Generation and Propagation in a Turbofan Model C92-144
Suppression of Fatigue-Inducing Cavity Acoustic Modes in Turbofan Engines C92-113
Noise of Two High-Speed Model Counter-Rotation Propellers at Takeoff/Approach Conditions C92-103

Boundary Layers and Heat Transfer—Laminar

Three-Dimensional Simulation of Electrothermal Deicing Systems C92-167
Heat Transfer Peculiarities in Supersonic Flows C92-158
Heat Transfer Effects on Aerodynamics and Implications for Wind-Tunnel Tests C92-031
Twenty-Five Years of Aerodynamic Research with Infrared Imaging C92-023

Boundary Layers and Heat Transfer—Turbulent

Heat Transfer Peculiarities in Supersonic Flows C92-158
Data Analysis for Unsteady Turbulence Measurements over Airfoils C92-045
Heat Transfer Effects on Aerodynamics and Implications for Wind-Tunnel Tests C92-031
Twenty-Five Years of Aerodynamic Research with Infrared Imaging C92-023
Heat Transfer on Accreting Ice Surfaces C92-015

Boundary-Layer Stability and Transition

Design Optimization of Natural Laminar Flow Bodies in Compressible Flow C92-050
Use of Shear-Sensitive Liquid Crystals for Surface Flow Visualization C92-040
Twenty-Five Years of Aerodynamic Research with Infrared Imaging C92-023
Transition Effects on Airfoil Dynamics and the Implications for Subscale Tests C89-169

Computational Fluid Dynamics

Multigrid Euler Calculations over Complete Aircraft C92-174
Numerical Modeling of an Advanced Pneumatic Impulse Ice Protection System for Aircraft C92-170
Numerical Simulation of Re-Entry Flow Around the Space Shuttle with Finite-Rate Chemistry C92-169
Aerodynamic Shape Design and Optimization: Status and Trends C92-165
Aerodynamic Design via Optimization C92-164
Unsteady Simulation of Viscous Flowfield Around F-18 Aircraft at Large Incidence C92-160
Predicting Droplet Impingement on Yawed Wings C92-155

Improved Calculation of Transonic Potential Flow Past Swept Wings C92-154
Viscous Flow Simulation of a Fighter Aircraft C92-143
Euler/Experiment Correlation of a Generic Fighter C92-139
Navier-Stokes Simulation of a Close-Coupled Canard-Wing-Body Configuration C92-138
Drag Computation by Vortex Methods C92-136
Thin-Airfoil Correction for Panel Methods C92-115
Design Load Predictions on a Fighter-Like Aircraft Wing C92-101
Simulation of Transonic Flow over Twin-Jet Transport Aircraft C92-097
Prediction of Inviscid Supersonic/Hypersonic Aircraft Flowfields C92-089
Navier-Stokes Predictions for the F-18 Wing and Fuselage at Large Incidence C92-087
Accurate Prediction of Drag Using Euler Methods C92-077
Wake Effects on the Prediction of Transonic Viscous Flows Around Airfoils C92-063
Numerical Study of Vortex-Dominated Flows for Wings at High Incidence and Sideslip C92-058
Transonic Navier-Stokes Computations for an Oscillating Wing Using Zonal Grids C92-048
Numerical Simulation of Leading-Edge Vortex Breakdown Using an Euler Code C92-044
Subsonic and Transonic Low-Reynolds-Number Airfoils with Reduced Pitching Moments C92-042
Navier-Stokes Methods to Predict Circulation Control Airfoil Performance C92-034
Navier-Stokes Study of Supersonic Cavity Flowfield with Passive Control C92-030
Evaluation of a Navier-Stokes Prediction of a Jet in a Crossflow C92-026
Separation Control Using Moving Surface Effects: A Numerical Simulation C92-019
Comparison of Two Navier-Stokes Codes for Attached Transonic Wing Flows C92-014
Navier-Stokes Calculations of Inboard Stall Delay Due to Rotation C92-010
Hot Gas Environment Around STOVL Aircraft in Ground Proximity—Part 2: Numerical Study C92-003

Hypersonic Flow

Optimized Scramjet Integration on a Waverider C92-179
Numerical Simulation of Re-Entry Flow Around the Space Shuttle with Finite-Rate Chemistry C92-169
Heat Transfer Peculiarities in Supersonic Flows C92-158

Inlet, Nozzle, Diffusor, and Channel Flows

Maximizing Thrust-Vectoring Control Power and Agility Metrics C92-098
Investigation of the Diffuser Flow Quality in an Icing Research Wind Tunnel C92-006

Jets, Wakes, and Viscid-Inviscid Flow Interactions

Transonic Low-Reynolds Number Airfoils C92-178
Unsteady Aerodynamics of a Wortmann Wing at Low Reynolds Numbers C92-082
Hot Gas Environment Around STOVL Aircraft in Ground Proximity—Part 1: Experimental Study C92-009
Prediction of Turbulent Flow Behavior over a Slotted Flap C92-007
Hot Gas Environment Around STOVL Aircraft in Ground Proximity—Part 2: Numerical Study C92-003
Transition Effects on Airfoil Dynamics and the Implications for Subscale Tests C89-169

Multiphase Flows

Remote Measurements of Supercooled Integrated Liquid Water During WISP/FAA Aircraft Icing Program C92-092

Rarefied Flows

Direct Simulation of Low-Density Flow over Airfoils C92-134

Separated Flows

Buffet Excitation of Wings at Low Speeds C92-182
Sources of High Alpha Vortex Asymmetry at Zero Sideslip C92-175
Physical Modeling of Ground Effects on Vortex Wakes C92-166
Small Two-Dimensional Surface Excrescences on Aircraft Wings Approaching Separation C92-145
Physics of Vortical Flows C92-141
Forcing Level Effects of Internal Acoustic Excitation on the Improvement of Airfoil Performance C92-137
Suppression of Fatigue-Inducing Cavity Acoustic Modes in Turbofan Engines C92-113
Self-Induced Roll Oscillations of Low-Aspect-Ratio Rectangular Wings C92-106
Forebody Vortex Control Using Small, Rotatable Strakes C92-102
Unsteady Aerodynamics of a Wortmann Wing at Low Reynolds Numbers C92-082
Drag Reduction of Bluff Bodies Through Momentum Injection C92-062
Design and Development of a Compressible Dynamic Stall Facility C92-046
Experimental Study of a Low Reynolds Number Tandem Airfoil Configuration C92-032
Navier-Stokes Study of Supersonic Cavity Flowfield with Passive Control C92-030
Computational Study of Incipient Leading-Edge Separation on a Supersonic Delta Wing C92-028
Interference Flows Past Cylinder-Fin-Sting-Cavity Assemblies C92-027
Wind-Tunnel Studies of F/A-18 Tail Buffet C92-021
Separation Control Using Moving Surface Effects: A Numerical Simulation C92-019
Approach to Side Force Alleviation Through Modification of the Pointed Forebody Geometry C92-018
Suppression of the Wing-Body Junction Vortex by Body Surface Suction C92-017
Effects of Trailing-Edge Flap on Buffet Characteristics of a Supercritical Airfoil C92-013

Shock Waves and Detonations

Sonic Boom Environment Under a Supersonic Military Operating Area C92-172
Numerical Modeling of an Advanced Pneumatic Impulse Ice Protection System for Aircraft C92-170

Subsonic Flow

Propeller Slip-Stream Model in Subsonic Linearized Potential Flow C92-177
Sources of High Alpha Vortex Asymmetry at Zero Sideslip C92-175
Predicting Droplet Impingement on Yawed Wings C92-155
Small Two-Dimensional Surface Excrescences on Aircraft Wings Approaching Separation C92-145
Wing Design for Hanggliders Having Minimum Induced Drag C92-118
Predicted Pressure Distribution on a Prop-Fan Blade Through Euler Analysis C92-095
Prediction of Vortex Shedding from Forebodies with Chines C92-059
Numerical Simulation of Leading-Edge Vortex Breakdown Using an Euler Code C92-044
Experimental Study of a Low Reynolds Number Tandem Airfoil Configuration C92-032
Efficient Panel Method for Vortex Sheet Roll-Up C92-004

Supersonic Flow

Application of Computational Fluid Dynamics to Sonic Boom Near- and Mid-Field Prediction C92-148
Prediction of Inviscid Supersonic/Hypersonic Aircraft Flowfields C92-089
Navier-Stokes Study of Supersonic Cavity Flowfield with Passive Control C92-030
Computational Study of Incipient Leading-Edge Separation on a Supersonic Delta Wing C92-028
Canard-Wing Interaction in Unsteady Supersonic Flow C89-155

Transonic Flow

Transonic Low-Reynolds Number Airfoils C92-178
Multigrid Euler Calculations over Complete Aircraft C92-174
Aerodynamic Design via Optimization C92-164
Improved Calculation of Transonic Potential Flow Past Swept Wings C92-154
Unsteady Shock-Vortex Interaction on a Flexible Delta Wing C92-132
Simulation of Transonic Flow over Twin-Jet Transport Aircraft C92-097
Calibration-Related Pseudo-Reynolds Number Trends in Transonic Wind Tunnels C92-084
Transonic Aeroelasticity Analysis for Rotor Blades C92-069
Wake Effects on the Prediction of Transonic Viscous Flows Around Airfoils C92-063
Transonic Navier-Stokes Computations for an Oscillating Wing Using Zonal Grids C92-048
Subsonic and Transonic Low-Reynolds-Number Airfoils with Reduced Pitching Moments C92-042
Numerical Computation of Improved Transonic Potential Method C92-025
Transonic Aeroelasticity Analysis Using State-Space Unsteady Aerodynamic Modeling C92-022
Comparison of Two Navier-Stokes Codes for Attached Transonic Wing Flows C92-014
Effects of Trailing-Edge Flap on Buffet Characteristics of a Supercritical Airfoil C92-013

Unsteady Flows

Unsteady Wind-Tunnel Interference in Aircraft Dynamic Experiments C92-180
Physical Modeling of Ground Effects on Vortex Wakes C92-166

Unsteady Simulation of Viscous Flowfield Around F-18 Aircraft at Large Incidence C92-160
Statistical Prediction of Maximum Buffet Loads on the F/A-18 Vertical Fin C92-120
Time-Average Loading on a Two-Dimensional Airfoil in Large Amplitude Motion C92-109
Unsteady Crossflow on a Delta Wing Using Particle Image Velocimetry C92-108
Self-Induced Roll Oscillations of Low-Aspect-Ratio Rectangular Wings C92-106
Experimental Study of Vortex Flows over Delta Wings in Wing-Rock Motion C92-091
Navier-Stokes Computations on Swept-Tapered Wings, Including Flexibility C92-090
Unsteady Aerodynamics of a Wortmann Wing at Low Reynolds Numbers C92-082
Unsteady Aerodynamic Loading Produced by a Sinusoidally Oscillating Delta Wing C92-054
Transonic Navier-Stokes Computations for an Oscillating Wing Using Zonal Grids C92-048
Design and Development of a Compressible Dynamic Stall Facility C92-046
Data Analysis for Unsteady Turbulence Measurements over Airfoils C92-045
Interference Flows Past Cylinder-Fin-Sting-Cavity Assemblies C92-027
Wind-Tunnel Studies of F/A-18 Tail Buffet C92-021
Effects of Trailing-Edge Flap on Buffet Characteristics of a Supercritical Airfoil C92-013
Rapid Prediction of High-Alpha Unsteady Aerodynamics of Slender-Wing Aircraft C92-012
Transition Effects on Airfoil Dynamics and the Implications for Subscale Tests C89-169

Viscous Non-Boundary-Layer Flows

Viscous Flow Simulation of a Fighter Aircraft C92-143
Physics of Vortical Flows C92-141
Drag Computation by Vortex Methods C92-136

Vortices

Wind-Tunnel Investigation of a Fighter Model at High Angles of Attack C92-176
Physical Modeling of Ground Effects on Vortex Wakes C92-166
Unsteady Simulation of Viscous Flowfield Around F-18 Aircraft at Large Incidence C92-160
Physics of Vortical Flows C92-141
Two-Fence Concept for Efficient Trapping of Vortices on Airfoils C92-140
Navier-Stokes Simulation of a Close-Coupled Canard-Wing-Body Configuration C92-138
Drag Computation by Vortex Methods C92-136
Unsteady Shock-Vortex Interaction on a Flexible Delta Wing C92-132
Effect of Nose-Boom on Forebody Vortex Flow C92-122
Pitch Rate/Sideslip Effects on Leading-Edge Extension Vortices of an F/A-18 Aircraft Model C92-114
Suppression of Fatigue-Inducing Cavity Acoustic Modes in Turbofan Engines C92-113
Forebody Vortex Control Using Small, Rotatable Strakes C92-102
Experimental Study of Vortex Flows over Delta Wings in Wing-Rock Motion C92-091
Navier-Stokes Computations on Swept-Tapered Wings, Including Flexibility C92-090
Navier-Stokes Predictions for the F-18 Wing and Fuselage at Large Incidence C92-087
Flow over a Twin-Tailed Aircraft at Angle of Attack, Part II: Temporal Characteristics C92-085
Accurate Prediction of Drag Using Euler Methods C92-077
Flow over a Twin-Tailed Aircraft at Angle of Attack Part I: Spatial Characteristics C92-060
Prediction of Vortex Shedding from Forebodies with Chines C92-059
Numerical Study of Vortex-Dominated Flows for Wings at High Incidence and Sideslip C92-058
Unsteady Aerodynamic Loading Produced by a Sinusoidally Oscillating Delta Wing C92-054
Numerical Simulation of Leading-Edge Vortex Breakdown Using an Euler Code C92-044
Effects of Ambient Turbulence on the Decay of a Trailing Vortex Wake C92-036
Effect of Wind Shear on Airspeed During Airplane Landing Approach C92-033
Computational Study of Incipient Leading-Edge Separation on a Supersonic Delta Wing C92-028
Approach to Side Force Alleviation Through Modification of the Pointed Forebody Geometry C92-018
Suppression of the Wing-Body Junction Vortex by Body Surface Suction C92-017
Rapid Prediction of High-Alpha Unsteady Aerodynamics of Slender-Wing Aircraft C92-012
Efficient Panel Method for Vortex Sheet Roll-Up C92-004

Guidance, Control, and Dynamics Technology

Aircraft Dynamics

Analytical Modeling of SH-2F Helicopter Shipboard Operation C92-142
System for Generating Sequences of Phased Gust or Taxi Loadings C92-104

Aircraft Guidance

Microwave Landing System Modeling with Application to Air Traffic Control Automation C92-051

Aircraft Stability and Control

Longitudinal Stability Analysis of Aerial-Towed Systems C92-159
Downwash for Joined-Wing Airframe with Control Surface Deflections C92-066
Application of Active Flexible Wing Technology to the Agile Falcon C92-064
Analysis of Airship Lateral Maneuverability C92-043

Artificial Intelligence

Wind-Tunnel Compressor Stall Monitoring Using Neural Networks C92-121
Expert System for Real-Time Aircraft Monitoring C92-011

Control System Design

Multidisciplinary Optimization of Aeroservoelastic Systems Using Reduced-Size Models C92-151

Dynamics

Longitudinal Stability Analysis of Aerial-Towed Systems C92-159
Flutter and Stall Response of a Helicopter Blade with Structural Nonlinearity C92-153

Flight Displays

Compensating Lags in Head-Coupled Displays Using Head Position Prediction and Image Deflection C92-171

Flight Mechanics

Maximizing Thrust-Vectoring Control Power and Agility Metrics C92-098
Identification of the Transfer Function Between Turbulence and Aircraft C92-057

Optimization Techniques

Aerodynamic Design via Optimization C92-164

State Estimation

Robust Flight Reconstruction for Helicopter Simulation and Training C92-061

System Identification

Reconstruction of Flight Path in Turbulence C92-081
Identification of the Transfer Function Between Turbulence and Aircraft C92-057

Trajectory Optimization

Control Strategy for Maximizing Reconnaissance Range of Hypersonic Cruise Vehicles C92-053

Interdisciplinary Topics

Aerospace Management

Structural Risk Assessment in the Israel Air Force for Fleet Management C92-083

Aerospace Technology Utilization

High Angle-of-Attack Flush Airdata Sensing System C92-147

Analytical and Numerical Methods

Numerical Modeling of an Advanced Pneumatic Impulse Ice Protection System for Aircraft C92-170
Application of Advanced Multidisciplinary Analysis and Optimization Methods to Vehicle Design Synthesis C92-135
Numerical Study of Vortex-Dominated Flows for Wings at High Incidence and Sideslip C92-058

Atmospheric and Space Sciences

Assessment of Microburst Models for Downdraft Estimation C92-168
Assessment of One-Dimensional Icing Forecast Model Applied to Stratiform Clouds C92-107
Airdata Calibration Techniques for Measuring Atmospheric Wind Profiles C92-096
Establishing a Database for Flight in the Wakes of Structures C92-086

Human Factors

Compensating Lags in Head-Coupled Displays Using Head Position Prediction and Image Deflection C92-171
Nine-Degree-of-Freedom Simulation of Rotating Parachute Systems C92-130

Range, Energy, Heat of Motion in the Modified NBC, Anti-g, Tank Suit C92-099
Improved Measurement of the Dynamic Loads Acting on Rotating Parachutes C92-067
Hazard Evaluation and Operational Cockpit Display of Ground-Measured Windshear Data C92-047

Reliability, Maintainability, and Logistics Support

Structural Risk Assessment in the Israel Air Force for Fleet Management C92-083
Composite Material Repairs to Metallic Airframe Components C92-068

Research Facilities and Instrumentation

Reconstruction of Flight Path in Turbulence C92-081
Investigation of the Diffuser Flow Quality in an Icing Research Wind Tunnel C92-006

Safety

Range, Energy, Heat of Motion in the Modified NBC, Anti-g, Tank Suit C92-099
Hazard Evaluation and Operational Cockpit Display of Ground-Measured Windshear Data C92-047

Sensor Systems

Correction of Sideslip-Induced Static Pressure Errors in Flight-Test Measurements C92-016

Launch Vehicle and Missile (LV/M) Technology

Aerodynamics

Aerodynamic Forces on Noncircular Cross-Section Missile Forebodies C92-093
Structural and Aerodynamic Data Transformation Using Inverse Isoparametric Mapping C92-073
Interference Flows Past Cylinder-Fin-Sting-Cavity Assemblies C92-027
Approach to Side Force Alleviation Through Modification of the Pointed Forebody Geometry C92-018

Configurational Design

Aerodynamic Forces on Noncircular Cross-Section Missile Forebodies C92-093

Testing, Flight and Ground

Airdata Calibration Techniques for Measuring Atmospheric Wind Profiles C92-096
Ground-Testing Techniques for Tethered Systems C92-035

Propulsion

Airbreathing Propulsion

Thermal Management for a Mach 5 Cruise Aircraft Using Endothermic Fuel C92-056
Control Strategy for Maximizing Reconnaissance Range of Hypersonic Cruise Vehicles C92-053
Preliminary Sizing Methodology for Hypersonic Vehicles C92-024
Compact Dynamometer System That Can Accurately Determine Propeller Performance C92-001

Ramjets and Scramjets

Thermal Management for a Mach 5 Cruise Aircraft Using Endothermic Fuel C92-056

Structural Mechanics and Materials

Aeroelasticity and Control

Unsteady Shock-Vortex Interaction on a Flexible Delta Wing C92-132
Aeroelastic Effects of Spoiler Surfaces on a Low-Aspect-Ratio Rectangular Wing C92-129
Statistical Prediction of Maximum Buffet Loads on the F/A-18 Vertical Fin C92-120
Whirl-Flutter Stability of a Pusher Configuration in Nonuniform Flow C92-117
Transition of the Flutter Mode of a Two-Dimensional Section with an External Store C92-075
Coalescence of Aeroelastic Modes in Flutter Analysis C92-072
Application of Active Flexible Wing Technology to the Agile Falcon C92-064
Integrated Aeroelastic Control Optimization of Laminated Composite Lifting Surfaces C92-039
Low-Speed Flutter Characteristics of Some Simple Low-Aspect-Ratio Delta-Wing Models C92-038
Wind-Tunnel Studies of F/A-18 Tail Buffet C92-021

Dynamic Model Analysis

Analytical Modeling of SH-2F Helicopter Shipboard Operation C92-142
System for Generating Sequences of Phased Gust or Taxi Loadings C92-104
Transition of the Flutter Mode of a Two-Dimensional Section with an External Store C92-075

Flexible and Active Structures

Wing Design for Hanggliders Having Minimum Induced Drag C92-118

Structural Composite Materials

Approach for Analysis and Design of Composite Rotor Blades C92-105
Experimental-Theoretical Investigation of the Vibration Characteristics of Rotating Composite Box Beams C92-100
Nonlinear Flutter of Two-Dimensional Simply Supported Symmetric Composite Laminated Plates C92-020

Structural Durability (including Fatigue and Fracture, and Environmental Degradation)

Acoustic Testing of High-Temperature Panels C92-181
Coining of Holes in Aluminum Plates: Finite Element Simulations and Experiments C92-152
System for Generating Sequences of Phased Gust or Taxi Loadings C92-104
Structural Risk Assessment in the Israel Air Force for Fleet Management C92-083
Composite Material Repairs to Metallic Airframe Components C92-068
Canard-Wing Interaction in Unsteady Supersonic Flow C89-155

Structural Dynamics and Characterization

Response of Double-Wall (Sandwich) Circular Plates to Random Excitations—Analytical Approach C92-150
Aeroelastic Effects of Spoiler Surfaces on a Low-Aspect-Ratio Rectangular Wing C92-129
Reduced Basis Alternatives to the Solution of Nonlinear Dynamical Systems C92-128
Statistical Prediction of Maximum Buffet Loads on the F/A-18 Vertical Fin C92-120
Experimental-Theoretical Investigation of the Vibration Characteristics of Rotating Composite Box Beams C92-100
Nonlinear Flutter of Two-Dimensional Simply Supported Symmetric Composite Laminated Plates C92-020

Structural Finite Elements

Coining of Holes in Aluminum Plates: Finite Element Simulations and Experiments C92-152
Structural and Aerodynamic Data Transformation Using Inverse Isoparametric Mapping C92-073

Structural Modeling

Response of Double-Wall (Sandwich) Circular Plates to Random Excitations—Analytical Approach C92-150
Approach for Analysis and Design of Composite Rotor Blades C92-105

Structural Optimization

Demonstration of Structural Optimization Applied to Wind-Tunnel Model Design C92-156
Application of Advanced Multidisciplinary Analysis and Optimization Methods to Vehicle Design Synthesis C92-135
Integrated Aeroelastic Control Optimization of Laminated Composite Lifting Surfaces C92-039

Thermal Effects

Acoustic Testing of High-Temperature Panels C92-181
Thermal Structures: Four Decades of Progress C92-070

Thermophysics and Heat Transfer

Aerothermodynamics/Thermal Protection

Thermal Structures: Four Decades of Progress C92-070

Forced Convection

Heat Transfer on Accreting Ice Surfaces C92-015

Melting/Solidification

Three-Dimensional Simulation of Electrothermal Deicing Systems C92-167

Thermal Modeling and Analysis

Thermal Structures: Four Decades of Progress C92-070

Chronological Index

C89-155 Canard-Wing Interaction in Unsteady Supersonic Flow. Valter J. E. Stark, *Saab Scania AB, Sweden* (**26**, 10, p. 951) Engineering Note
Reply (**29**, 4, p. 744)

C89-169 Transition Effects on Airfoil Dynamics and the Implications for Subscale Tests. L. E. Ericsson, *Lockheed Missiles & Space Company, Inc.* (**26**, 12, p. 1051) Article based on AIAA Paper 87-2353 CP875
Technical Comment by D. G. Mabey, *Royal Aerospace Establishment, England, UK* (**29**, 3, p. 519)
Reply (**29**, 3, p. 520)

C90-105 NASA Investigation of a Claimed 'Overlap' between Two Gust Response Analysis Methods. Boyd Perry III, *NASA Langley Research Center*; Anthony S. Pototzky and Jessica A. Woods, *Planning Research Corporation* (**27**, 7, p. 605) Article based on AIAA Paper 89-1376 CP891
Technical Comment by Bernard Etkin, *University of Toronto, Canada* (**29**, 4, p. 741)
Reply (**29**, 4, p. 743)

C90-108 Minimum Induced Drag for Wings with Spanwise Camber. Martin V. Lowson, *University of Bristol, England, UK* (**27**, 7, p. 627) Article
Errata (**29**, 5, p. 968)

C92-001 Compact Dynamometer System That Can Accurately Determine Propeller Performance. Kenneth M. Asson and Patrick F. Dunn, *University of Notre Dame* (**29**, 1, p. 8) Article

C92-002 On the Threshold—The Outlook for Supersonic and Hypersonic Aircraft. Roy V. Harris Jr., *NASA Langley Research Center* (**29**, 1, p. 10) Article based on AIAA Paper 89-2071

C92-003 Hot Gas Environment Around STOVL Aircraft in Ground Proximity—Part 2: Numerical Study. D. K. Tafti and S. P. Vanka, *University of Illinois, Urbana-Champaign* (**29**, 1, p. 20) Article based on AIAA Paper 90-2270

C92-004 Efficient Panel Method for Vortex Sheet Roll-Up. François Lamarre, *Princeton University*; and Ion Paraschivoiu, *Ecole Polytechnique de Montréal, Canada* (**29**, 1, p. 28) Article

C92-005 Agility as a Contributor to Design Balance. Andrew M. Skow, *Eidetics Aircraft, Inc.* (**29**, 1, p. 34) Article based on AIAA Paper 90-1305 CP904

C92-006 Investigation of the Diffuser Flow Quality in an Icing Research Wind Tunnel. Harold E. Addy Jr., *NASA Lewis Research Center*; and Theo G. Keith Jr., *University of Toledo* (**29**, 1, p. 47) Article based on AIAA Paper 89-0755/90-0488

C92-007 Prediction of Turbulent Flow Behavior over a Slotted Flap. Srinath S. Heragu, *Aeronautical Development Agency, India* (**29**, 1, p. 52) Article

C92-008 Forward-Look Wind-Shear Detection for Microburst Recovery. David A. Hinton, *NASA Langley Research Center* (**29**, 1, p. 63) Article based on AIAA Paper 89-3325 CP897

C92-009 Hot Gas Environment Around STOVL Aircraft in Ground Proximity—Part 1: Experimental Study. R. MacLean, J. Sullivan and S. N. B. Murthy, *Purdue University* (**29**, 1, p. 67) Article based on AIAA Paper 90-2269

C92-010 Navier-Stokes Calculations of Inboard Stall Delay Due to Rotation. J. C. Narramore, *Bell Helicopter Textron, Inc.*; and R. Vermeland, *CRAY Research, Inc.* (**29**, 1, p. 73) Article based on AIAA Paper 89-1814

C92-011 Expert System for Real-Time Aircraft Monitoring. Joey B. Flanders, *U.S. Air Force Flight Test Center, Edwards AFB*; Charles H. Jones, *Washington State University*; and Robin M. Madison, *U.S. Air Force Flight Test Center, Edwards AFB* (**29**, 1, p. 79) Article based on AIAA Paper 90-1311 CP904

C92-012 Rapid Prediction of High-Alpha Unsteady Aerodynamics of Slender-Wing Aircraft. L. E. Ericsson and H. H. C. King, *Lockheed Missiles & Space Company, Inc.* (**29**, 1, p. 85) Article based on AIAA Paper 90-3037 CP908

C92-013 Effects of Trailing-Edge Flap on Buffet Characteristics of a Supercritical Airfoil. B. H. K. Lee, *National Research Council, Canada* (**29**, 1, p. 93) Article

C92-014 Comparison of Two Navier-Stokes Codes for Attached Transonic Wing Flows. Daryl L. Bonhaus and Stephen F. Wornom, *NASA Langley Research Center* (**29**, 1, p. 101) Article

C92-015 Heat Transfer on Accreting Ice Surfaces. Keiko Yamaguchi and R. John Hansman Jr., *Massachusetts Institute of Technology* (**29**, 1, p. 108) Article based on AIAA Paper 90-0200

C92-016 Correction of Sideslip-Induced Static Pressure Errors in Flight-Test Measurements. Edwin K. Parks, *University of Arizona*; Ralph E. Bach Jr. and Duc Tran, *NASA Ames Research Center* (**29**, 1, p. 114) Article based on AIAA Paper 90-3082 CP908

C92-017 Suppression of the Wing-Body Junction Vortex by Body Surface Suction. D. B. Philips, J. M. Cimbala and A. L. Treaster, *Pennsylvania State University* (**29**, 1, p. 118) Article

C92-018 Approach to Side Force Alleviation Through Modification of the Pointed Forebody Geometry. V. J. Modi and A. C. Stewart, *University of British Columbia, Canada* (**29**, 1, p. 123) Article based on AIAA Paper 90-2834 CP906

C92-019 Separation Control Using Moving Surface Effects: A Numerical Simulation. A. A. Hassan, *McDonnell Douglas Helicopter Company*; and L. N. Sankar, *Georgia Institute of Technology* (**29**, 1, p. 131) Article based on AIAA Paper 89-0972

C92-020 Nonlinear Flutter of Two-Dimensional Simply Supported Symmetric Composite Laminated Plates. Le-Chung Shiau and Li-Teh Lu, *National Cheng Kung University, Taiwan, ROC* (**29**, 1, p. 140) Article

C92-021 Wind-Tunnel Studies of F/A-18 Tail Buffet. B. H. K. Lee and D. Brown, *National Research Council, Canada* (**29**, 1, p. 146) Article based on AIAA Paper 90-1432 CP905

C92-022 Transonic Aeroelasticity Analysis Using State-Space Unsteady Aerodynamic Modeling. G. L. Crouse Jr. and J. G. Leishman, *University of Maryland* (**29**, 1, p. 153) Article based on AIAA Paper 89-0022

C92-023 Twenty-Five Years of Aerodynamic Research with Infrared Imaging. Ehud Gartenberg and A. Sidney Roberts Jr., *Old Dominion University* (**29**, 2, p. 161) Article

C92-024 Preliminary Sizing Methodology for Hypersonic Vehicles. Armand J. Chaput, *General Dynamics Corporation* (**29**, 2, p. 172) Article based on AIAA Paper 87-2954

C92-025 Numerical Computation of Improved Transonic Potential Method. Zhu Zi-qianq and Bai Xue-Song, *Beijing University of Aeronautics and Astronautics, PRC* (**29**, 2, p. 180) Article

C92-026 Evaluation of a Navier-Stokes Prediction of a Jet in a Crossflow. Karlin R. Roth, *NASA Ames Research Center*; Richard L. Fearn and Siddharth S. Thakur, *University of Florida* (**29**, 2, p. 185) Article based on AIAA Paper 89-0448

C92-027 Interference Flows Past Cylinder-Fin-Sting-Cavity Assemblies. O. Baysal and K. Fouladi, *Old Dominion University*; R. W. Leung and J. S. Sheftic, *Lockheed Missiles and Space Company, Inc.* (**29**, 2, p. 194) Article based on AIAA Paper 90-3095 CP908

C92-028 Computational Study of Incipient Leading-Edge Separation on a Supersonic Delta Wing. S. Naomi McMillin, James L. Pittman and James L. Thomas, *NASA Langley Research Center* (**29**, 2, p. 203) Article based on AIAA Paper 90-3029 CP908

C92-029 Self-Compensating Carrier Aircraft Recovery System. Rolf Brodersen and Gregory Sauer, *Martin Marietta Corporation* (**29**, 2, p. 210) Article based on AIAA Paper 90-3273

C92-030 Navier-Stokes Study of Supersonic Cavity Flowfield with Passive Control. I. Kim and N. Chokani, *North Carolina State University* (**29**, 2, p. 217) Article based on AIAA Paper 90-3101 CP908

C92-031 Heat Transfer Effects on Aerodynamics and Implications for Wind-Tunnel Tests. D. G. Mabey, *Royal Aerospace Establishment, England, UK* (**29**, 2, p. 224) Article

C92-032 Experimental Study of a Low Reynolds Number Tandem Airfoil Configuration. Daniel F. Scharpf and Thomas J. Mueller, *University of Notre Dame* (**29**, 2, p. 231) Article based on AIAA Paper 90-3094 CP908

C92-033 Effect of Wind Shear on Airspeed During Airplane Landing Approach. Roland J. White, *Boeing Company* (**29**, 2, p. 237) Article based on AIAA Paper 90-2838 CP906

C92-034 Navier-Stokes Methods to Predict Circulation Control Airfoil Performance. S. L. Williams, *Aeronautical Systems Division, Wright-Patterson AFB*; and M. E. Franke, *U.S. Air Force Institute of Technology, Wright-Patterson AFB* (**29**, 2, p. 243) Article based on AIAA Paper 90-0574

C92-035 Ground-Testing Techniques for Tethered Systems. A. Cenko, *U.S. Naval Air Development Center*; G. Clessas, *U.S. Naval Air Systems Command*; and K. Phillips, *David Taylor Research Center* (**29**, 2, p. 250) Article based on AIAA Paper 90-1428 CP905

C92-036 Effects of Ambient Turbulence on the Decay of a Trailing Vortex Wake. H.-T. Liu, *QUEST Integrated, Inc.* (**29**, 2, p. 255) Article

C92-037 Controlled Opening Method for Clustered Parachutes. Calvin K. Lee and James E. Sadeck, *U.S. Army Natick Research, Development, and Engineering Center* (**29**, 2, p. 264) Article based on AIAA Paper 89-0892 CP893

C92-038 Low-Speed Flutter Characteristics of Some Simple Low-Aspect-Ratio Delta-Wing Models. Robert V. Doggett Jr., *NASA Langley Research Center*; and David L. Soistmann, *Planning Research Corporation* (**29**, 2, p. 273) Article based on AIAA Paper 89-1325 CP891

C92-039 Integrated Aeroelastic Control Optimization of Laminated Composite Lifting Surfaces. Theodore N. Dracopoulos and Hayrani Öz, *Ohio State University* (**29**, 2, p. 280) Article

C92-040 Use of Shear-Sensitive Liquid Crystals for Surface Flow Visualization. Stephen C. Smith, *NASA Ames Research Center* (**29**, 2, p. 289) Article based on AIAA Paper 90-1382 CP905

C92-041 Dynamics of an Optimized Rotor Blade at Off-Design Flight Conditions. Aditi Chattopadhyay, *Arizona State University*; and Henry Jones, *NASA Langley Research Center* (**29**, 2, p. 294) Engineering Note

C92-042 Subsonic and Transonic Low-Reynolds-Number Airfoils with Reduced Pitching Moments. J. Reuther and C. P. van Dam, *University of California, Davis*; and R. Hicks, *NASA Ames Research Center* (**29**, 3, p. 297) Article based on AIAA Paper 90-3213

C92-043 Analysis of Airship Lateral Maneuverability. B. L. Nagabhushan and Ramin P. K. Pasha, *Parks College of Saint Louis University* (**29**, 3, p. 299) Article based on AIAA Paper 91-1274 CP913

C92-044 Numerical Simulation of Leading-Edge Vortex Breakdown Using an Euler Code. P. J. O'Neil, R. M. Barnett and C. M. Louie, *McDonnell Aircraft Company, McDonnell Douglas Corporation* (**29**, 3, p. 301) Article based on AIAA Paper 89-2189 CP896

C92-045 Data Analysis for Unsteady Turbulence Measurements over Airfoils. Donald K. Johnson, Richard M. Howard and Paul N. Ilacqua, *Naval Postgraduate School* (**29**, 3, p. 308) Article

C92-046 Design and Development of a Compressible Dynamic Stall Facility. L. W. Carr, *U.S. Army AVSCOM and NASA Ames Research Center*; and M. S. Chandrasekhara, *Naval Postgraduate School* (**29**, 3, p. 314) Article based on AIAA Paper 89-0647

C92-047 Hazard Evaluation and Operational Cockpit Display of Ground-Measured Windshear Data. Craig Wanke and R. John Hansman Jr., *Massachusetts Institute of Technology* (**29**, 3, p. 319) Article based on AIAA Paper 90-0566

C92-048 Transonic Navier-Stokes Computations for an Oscillating Wing Using Zonal Grids. Neal M. Chaderjian and Guru P. Guruswamy, *NASA Ames Research Center* (**29**, 3, p. 326) Article based on AIAA Paper 90-0313

C92-049 Effects of Higher Harmonic Control on Rotor Performance and Control Loads. Khanh Nguyen, *NASA Ames Research Center*; and Inderjit Chopra, *University of Maryland* (**29**, 3, p. 336) Article based on AIAA Paper 90-1158 CP902

C92-050 Design Optimization of Natural Laminar Flow Bodies in Compressible Flow. Simha S. Dodbele, *ViGYAN, Inc.* (**29**, 3, p. 343) Article based on AIAA Paper 90-0303

C92-051 Microwave Landing System Modeling with Application to Air Traffic Control Automation. M. M. Poulose, *Institut Teknologi, Brunei* (**29**, 3, p. 348) Article

C92-052 Software Reliability for Flight Crew Training Simulators. George E. Stark, *MITRE Corporation* (**29**, 3, p. 355) Article based on AIAA Paper 90-3122 CP9010

C92-053 Control Strategy for Maximizing Reconnaissance Range of Hypersonic Cruise Vehicles. H. G. Kauffman, R. V. Grandhi, W. L. Hankey and P. J. Belcher, *Wright State University* (**29**, 3, p. 360) Article based on AIAA Paper 90-3292

C92-054 Unsteady Aerodynamic Loading Produced by a Sinusoidally Oscillating Delta Wing. S. A. Huyer, M. C. Robinson and M. W. Luttges, *University of Colorado* (**29**, 3, p. 366) Article based on AIAA Paper 90-1536

C92-055 Extension and Validation of an Unsteady Wake Model for Rotors. Ay Su, Kyung M. Yoo and David A. Peters, *Georgia Institute of Technology* (**29**, 3, p. 374) Article

C92-056 Thermal Management for a Mach 5 Cruise Aircraft Using Endothermic Fuel. Dennis H. Petley, *NASA Langley Research Center*; and Stuart C. Jones, *Lockheed Engineering & Sciences Company* (**29**, 3, p. 384) Article based on AIAA Paper 90-3284

C92-057 Identification of the Transfer Function Between Turbulence and Aircraft. Qing Chen and Gunther Schänzer, *Technical University of Braunschweig, FRG* (**29**, 3, p. 390) Article

C92-058 Numerical Study of Vortex-Dominated Flows for Wings at High Incidence and Sideslip. C.-H. Hsu, *ViGYAN, Inc.*; and C. H. Liu, *NASA Langley Research Center* (**29**, 3, p. 396) Article based on AIAA Paper 90-3001 CP908

C92-059 Prediction of Vortex Shedding from Forebodies with Chines. Michael R. Mendenhall and Daniel J. Lesieutre, *Nielsen Engineering & Research, Inc.* (**29**, 3, p. 404) Article

C92-060 Flow over a Twin-Tailed Aircraft at Angle of Attack Part I: Spatial Characteristics. N. M. Komerath, S. G. Liou, R. J. Schwartz and J. M. Kim, *Georgia Institute of Technology* (**29**, 3, p. 413) Article

C92-061 Robust Flight Reconstruction for Helicopter Simulation and Training. K. KrishnaKumar, R. K. Prasanth and J. E. Bailey, *University of Alabama* (**29**, 3, p. 421) Article

C92-062 Drag Reduction of Bluff Bodies Through Momentum Injection. V. J. Modi, E. Shih and B. Ying, *University of British Columbia, Canada*; and T. Yokomizo, *Kanto Gakuin University, Japan* (**29**, 3, p. 429) Article based on AIAA Paper 90-3076 CP908

C92-063 Wake Effects on the Prediction of Transonic Viscous Flows Around Airfoils. D. P. Coiro, P. de Matteis and M. Amato, *CIRA, Centro Italiano Ricerche Aerospaziali, Italy* (**29**, 3, p. 437) Article based on AIAA Paper 90-3061 CP908

C92-064 Application of Active Flexible Wing Technology to the Agile Falcon. Edmund Pendleton and Mark Lee, *Wright Laboratory, Wright-Patterson AFB*; and Lee Wasserman, *Delta Dynamics, Inc.* (**29**, 3, p. 444) Article based on AIAA Paper 91-0987 CP911

C92-065 Fighter Agility Metrics, Research and Test. Randall K. Liefer, John Valasek, David P. Eggold and David R. Downing, *University of Kansas* (**29**, 3, p. 452) Article based on AIAA Paper 90-2807 CP906

C92-066 Downwash for Joined-Wing Airframe with Control Surface Deflections. John E. Burkhalter, Donald J. Spring and M. Kent Key, *Auburn University* (**29**, 3, p. 458) Article

C92-067 Improved Measurement of the Dynamic Loads Acting on Rotating Parachutes. Z. Shpund and D. Levin, *Technion Foundation for Research and Development, Israel* (**29**, 3, p. 465) Article based on AIAA Paper 86-2473 CP8610

C92-068 Composite Material Repairs to Metallic Airframe Components. T. F. Christian Jr. and D. O. Hammond, *Warner Robins Air Logistics Center, Robins AFB*; and J. B. Cochran, *Lockheed Aeronautical Systems Company—Georgia Division* (**29**, 3, p. 470) Article based on AIAA Paper 89-1408 CP891

C92-069 Transonic Aeroelasticity Analysis for Rotor Blades. Lie-Mine Gea and Chuen-Yen Chow, *University of Colorado*; and I-Chung Chang, *NASA Ames Research Center* (**29**, 3, p. 477) Article based on AIAA Paper 89-2212 CP896

C92-070 Thermal Structures: Four Decades of Progress. Earl A. Thornton, *University of Virginia* (**29**, 3, p. 485) Article based on AIAA Paper 90-0971 CP901

C92-071 Structure-Borne Noise Transmission in the Propfan Test Assessment Aircraft. James F. Unruh, *Southwest Research Institute* (**29**, 3, p. 499) Article based on AIAA Paper 90-3966

C92-072 Coalescence of Aeroelastic Modes in Flutter Analysis. Maher N. Bismarck-Nasr, *Instituto Tecnológico de Aeronáutica, Brazil* (**29**, 3, p. 505) Engineering Note

C92-073 Structural and Aerodynamic Data Transformation Using Inverse Isoparametric Mapping. R. M. V. Pidaparti, *Purdue University* (**29**, 3, p. 507) Engineering Note

C92-074 Effect of Thrust Vectoring on Level-Turn Performance. Pai-Hung Lee, *Aeronautical Research Laboratory, Taiwan, ROC*; and C. Edward Lan, *University of Kansas* (**29**, 3, p. 509) Engineering Note

C92-075 Transition of the Flutter Mode of a Two-Dimensional Section with an External Store. Zhi-chun Yang and Lingcheng Zhao, *Northwestern Polytechnical University, PRC* (**29**, 3, p. 511) Engineering Note

C92-076 Characteristic Differences Between the Modal Parameters of Cast and Forged Structures. H. V. Panossian, *Rockwell International Corporation* (**29**, 3, p. 513) Engineering Note

C92-077 Accurate Prediction of Drag Using Euler Methods. C. P. van Dam and K. Nikfetrat, *University of California, Davis* (**29**, 3, p. 516) Engineering Note based on AIAA Paper 91-0338

C92-080 Flight Model for Unmanned Simulated Helicopters. Amnon Katz, *University of Alabama*; and Brett E. Butler, *McDonnell Douglas Helicopter Company* (**29**, 4, p. 521) Article

C92-081 Reconstruction of Flight Path in Turbulence. Qing Chen, *Technical University of Braunschweig, FRG*; and Yuan Lin, *DLR Institute of Flight Mechanics, FRG* (**29**, 4, p. 527) Article

C92-082 Unsteady Aerodynamics of a Wortmann Wing at Low Reynolds Numbers. H.-T. Liu, *QUEST Integrated, Inc.* (**29**, 4, p. 532) Article

C92-083 Structural Risk Assessment in the Israel Air Force for Fleet Management. Zohar Yosibash, *Structure Branch, Israeli Air Force* (**29**, 4, p. 540) Article

C92-084 Calibration-Related Pseudo-Reynolds Number Trends in Transonic Wind Tunnels. Felix Aulehla, *MBB-Deutsche Aerospace, FRG* (**29**, 4, p. 545) Article based on AIAA Paper 87-2612 CP875

C92-085 Flow over a Twin-Tailed Aircraft at Angle of Attack, Part II: Temporal Characteristics. N. M. Komerath, R. J. Schwartz and J. M. Kim, *Georgia Institute of Technology* (29, 4, p. 553) Article

C92-086 Establishing a Database for Flight in the Wakes of Structures. J. Val Healey, *Naval Postgraduate School* (29, 4, p. 559) Article

C92-087 Navier-Stokes Predictions for the F-18 Wing and Fuselage at Large Incidence. Russell M. Cummings, Yehia M. Rizk, Lewis B. Schiff and Neal M. Chaderjian, *NASA Ames Research Center* (29, 4, p. 565) Article based on AIAA Paper 90-0099

C92-088 Aircraft-Triggered Lightning: Processes Following Strike Initiation that Affect Aircraft. Vladislav Mazur, *National Oceanic and Atmospheric Administration/National Severe Storms Laboratory*; and Jean-Patrick Moreau, *Office National D'etudes et de Recherches Aerospatiales, France* (29, 4, p. 575) Article

C92-089 Prediction of Inviscid Supersonic/Hypersonic Aircraft Flowfields. A. Verhoff and D. Stookesberry, *McDonnell Aircraft Company* (29, 4, p. 581) Article

C92-090 Navier-Stokes Computations on Swept-Tapered Wings, Including Flexibility. Guru P. Guruswamy, *NASA Ames Research Center* (29, 4, p. 588) Article based on AIAA Paper 90-1152 CP902

C92-091 Experimental Study of Vortex Flows over Delta Wings in Wing-Rock Motion. T. Terry Ng, Gerald N. Malcolm and Liane C. Lewis, *Eidetics International, Inc.* (29, 4, p. 598) Article based on AIAA Paper 89-2187 CP896

C92-092 Remote Measurements of Supercooled Integrated Liquid Water During WISP/FAA Aircraft Icing Program. B. B. Stankov, E. R. Westwater, J. B. Snider and R. L. Weber, *National Oceanic and Atmospheric Administration/Environmental Research Laboratories* (29, 4, p. 604) Article based on AIAA Paper 91-0351

C92-093 Aerodynamic Forces on Noncircular Cross-Section Missile Forebodies. Brian E. Est and H. F. Nelson, *University of Missouri—Rolla* (29, 4, p. 612) Article based on AIAA Paper 91-0390

C92-094 Flight Deck Aerodynamics of a Nonaviation Ship. M. M. Rhoades and J. Val. Healey, *Naval Postgraduate School* (29, 4, p. 619) Article

C92-095 Predicted Pressure Distribution on a Prop-Fan Blade Through Euler Analysis. Makoto Kobayakawa, *Kyoto University, Japan*; Ryoji Takaki, *National Aerospace Laboratory, Japan*; Yoshifumi Kawakami, *Sumitomo Precision Products Ltd., Japan*; and Frederick B. Metzger, *Hamilton Standard* (29, 4, p. 627) Article

C92-096 Airdata Calibration Techniques for Measuring Atmospheric Wind Profiles. Edward A. Haering Jr., *NASA Dryden Flight Research Facility* (29, 4, p. 632) Article based on AIAA Paper 90-0230

C92-097 Simulation of Transonic Flow over Twin-Jet Transport Aircraft. S. Rill and K. Becker, *Deutsche Airbus GmbH, FRG* (29, 4, p. 640) Article based on AIAA Paper 91-0025

C92-098 Maximizing Thrust-Vectoring Control Power and Agility Metrics. Benjamin Z. Gal-Or, *Technion—Israel Institute of Technology* (29, 4, p. 647) Article

C92-099 Range, Energy, Heat of Motion in the Modified NBC, Anti-*g*, Tank Suit. Joseph A. Mastropaolo, *Trisphere Institute of Sports Medicine;* A. Neal de Gaston and Craig H. Durck, *McDonnell Douglas Corporation*; and Allen R. Van Santen, *Trisphere Institute of Sports Medicine* (29, 4, p. 652) Article

C92-100 Experimental-Theoretical Investigation of the Vibration Characteristics of Rotating Composite Box Beams. Ramesh Chandra and Inderjit Chopra, *University of Maryland* (29, 4, p. 657) Article

C92-101 Design Load Predictions on a Fighter-Like Aircraft Wing. S. Agrawal, P. J. Malloy and D. F. Fuglsang, *McDonnell Douglas Corporation* (29, 4, p. 665) Article

C92-102 Forebody Vortex Control Using Small, Rotatable Strakes. T. Terry Ng, *University of Toledo*; and Gerald N. Malcolm, *Eidetics International, Inc.* (29, 4, p. 671) Article based on AIAA Paper 91-0618

C92-103 Noise of Two High-Speed Model Counter-Rotation Propellers at Takeoff/Approach Conditions. Richard P. Woodward, *NASA Lewis Research Center* (29, 4, p. 679) Article based on AIAA Paper 87-2657

C92-104 System for Generating Sequences of Phased Gust or Taxi Loadings. Robert G. Eastin, Trygve R. Lerwick and Sven M. Soedel, *McDonnell Douglas Corporation* (29, 4, p. 686) Article

C92-105 Approach for Analysis and Design of Composite Rotor Blades. Geraldo A. Macedo Moura, *Centro Ténico Aerospacial, Brazil*; and Ramesh Kolar, *Naval Postgraduate School* (29, 4, p. 693) Article based on AIAA Paper 90-1005 CP902

C92-106 Self-Induced Roll Oscillations of Low-Aspect-Ratio Rectangular Wings. Daniel Levin, *NASA Ames Research Center*; and Joseph Katz, *San Diego State University* (29, 4, p. 698) Article based on AIAA Paper 90-2811 CP906

C92-107 Assessment of One-Dimensional Icing Forecast Model Applied to Stratiform Clouds. Arnold Tunick and Henry Rachele, *U. S. Army Atmospheric Sciences Laboratory, White Sands Missile Range* (29, 4, p. 703) Article based on AIAA Paper 91-0352

C92-108 Unsteady Crossflow on a Delta Wing Using Particle Image Velocimetry. C. Magness, O. Robinson and D. Rockwell, *Lehigh University* (29, 4, p. 707) Engineering Note

C92-109 Time-Average Loading on a Two-Dimensional Airfoil in Large Amplitude Motion. G. M. Graham and M. Islam, *Ohio University* (29, 4, p. 709) Engineering Note based on AIAA Paper 90-2810 CP906

C92-110 Optimum Cruise Lift Coefficient in Initial Design of Jet Aircraft. Rodrigo Martinez-Val and Emilio Perez, *Universidad Politecnica de Madrid, Spain* (29, 4, p. 712) Engineering Note

C92-111 Advanced Pneumatic Impulse Ice Protection System (PIIP) for Aircraft. Charles A. Martin and James, C. Putt, *BF Goodrich Aerospace, De-Icing Systems* (29, 4, p. 714) Engineering Note based on AIAA Paper 90-0492

C92-112 Minimizing Supersonic Wave Drag with Physical Constraints at Design and Off-Design Mach Numbers. Jen-Fu Chang, *Aeronautical Research Laboratory, Taiwan, ROC* (29, 4, p. 716) Engineering Note

C92-113 Suppression of Fatigue-Inducing Cavity Acoustic Modes in Turbofan Engines. Robert H. Benner, *Rohr Incorporated* (29, 4, p. 718) Engineering Note based on AIAA Paper 90-3941

C92-114 Pitch Rate/Sideslip Effects on Leading-Edge Extension Vortices of an F/A-18 Aircraft Model. Sheshagiri K. Hebbar and Max F. Platzer, *Naval Postgraduate School*; and Odilon V. Cavazos, *Naval Air Station* (29, 4, p. 720) Engineering Note based on AIAA Paper 91-0280

C92-115 Thin-Airfoil Correction for Panel Methods. J. Carter and P. S. Jackson, *University of Auckland, New Zealand* (29, 4, p. 723) Engineering Note

C92-116 Wing Mass Formula for Subsonic Aircraft. Sergei V. Udin and William J. Anderson, *University of Michigan* (29, 4, p. 725) Engineering Note

C92-117 Whirl-Flutter Stability of a Pusher Configuration in Nonuniform Flow. F. Nitzsche and E. A. Rodrigues, *EMBRAER—Empresa Brasileira de Aeronáutica, Brazil* (29, 4, p. 727) Engineering Note

C92-118 Wing Design for Hanggliders Having Minimum Induced Drag. Takeshi Sugimoto, *University of Tokyo, Japan* (29, 4, p. 730) Engineering Note

C92-119 Optimization of Constant Altitude—Constant Airspeed Flight of Turbojet Aircraft. Shiva Kumar Ojha, *Indian Institute of Technology* (29, 4, p. 731) Engineering Note

C92-120 Statistical Prediction of Maximum Buffet Loads on the F/A-18 Vertical Fin. B. H. K. Lee and S. Dunlavy, *Institute for Aerospace Research, Canada* (29, 4, p. 734) Engineering Note

C92-121 Wind-Tunnel Compressor Stall Monitoring Using Neural Networks. Ching F. Lo and G. Z. Shi, *University of Tennessee Space Institute* (29, 4, p. 736) Engineering Note based on AIAA Paper 91-2500

C92-122 Effect of Nose-Booms on Forebody Vortex Flow. T. Terry Ng, *University of Toledo* (29, 4, p. 738) Engineering Note

C92-126 Escape Strategies for Turboprop Aircraft in Microburst Windshear. Richard B. Bobbitt and Richard M. Howard, *Naval Postgraduate School* (29, 5, p. 745) Article based on AIAA Paper 91-2945

C92-127 Evaluation of Discrete Frequency Sound in Closed-Test-Section Wind Tunnels. Marianne Mosher, *NASA Ames Research Center* (29, 5, p. 753) Article based on AIAA Paper 90-4011

C92-128 Reduced Basis Alternatives to the Solution of Nonlinear Dynamical Systems. Chia L. Chang, *National Yunlin Institute of Technology, Taiwan, ROC*; and John J. Engblom, *Florida Institute of Technology* (29, 5, p. 760) Article

C92-129 Aeroelastic Effects of Spoiler Surfaces on a Low-Aspect-Ratio Rectangular Wing. Stanley R. Cole, *NASA Langley Research Center* (29, 5, p. 768) Article based on AIAA Paper 90-0981

C92-130 Nine-Degree-of-Freedom Simulation of Rotating Parachute Systems. Karl-Friedrich Doherr, *DLR-Institut für Flugmechanik, FRG*; and Hartmut Schilling, *Rheinmetall GmbH, FRG* (29, 5, p. 774) Article based on AIAA Paper 91-0877

C92-131 Dynamic Analysis of Rotor Blades with Root Retention Design Variations. R. G. Loewy, A. Rosen, M. B. Mathew and M. Zotto, *Rensselaer Polytechnic Institute* (29, 5, p. 782) Article based on AIAA Paper 90-1159 CP902

C92-132 Unsteady Shock-Vortex Interaction on a Flexible Delta Wing. Shigeru Obayashi and Guru P. Guruswamy, *NASA Ames Research Center* (29, 5, p. 790) Article based on AIAA Paper 90-1109 CP902

C92-133 Model Flight Tests of a Spin-Resistant Trainer Configuration. Long P. Yip, Holly M. Ross and David B. Robelen, *NASA Langley Research Center* (29, 5, p. 799) Article based on AIAA Paper 88-2146 CP885

C92-134 Direct Simulation of Low-Density Flow over Airfoils. Tsze C. Tai, *Naval Surface Warfare Center* (29, 5, p. 806) Article based on AIAA Paper 90-1539

C92-135 Application of Advanced Multidisciplinary Analysis and Optimization Methods to Vehicle Design Synthesis. Robert David Consoli, *General Dynamics*; and Jaroslaw Sobieszczanski-Sobieski, *NASA Langley Research Center* (29, 5, p. 811) Article

C92-136 Drag Computation by Vortex Methods. Mayer Humi, *Worcester Polytechnic Institute* (29, 5, p. 819) Article

C92-137 Forcing Level Effects of Internal Acoustic Excitation on the Improvement of Airfoil Performance. R. C. Chang, *CSIST, Taiwan, ROC*; F.-B. Hsiao and R.-N. Shyu, *National Cheng Kung University, Taiwan, ROC* (29, 5, p. 823) Article

C92-138 Navier-Stokes Simulation of a Close-Coupled Canard-Wing-Body Configuration. Eugene L. Tu, *NASA Ames Research Center* (29, 5, p. 830) Article

C92-139 Euler/Experiment Correlation of a Generic Fighter. Aga M. Goodsell, *NASA Ames Research Center* (29, 5, p. 839) Article

C92-140 Two-Fence Concept for Efficient Trapping of Vortices on Airfoils. Vernon J. Rossow, *NASA Ames Research Center* (29, 5, p. 847) Article

C92-141 Physics of Vortical Flows. Jean M. Délery, *Office National d'Etudes et de Recherches Aérospatiales, France* (29, 5, p. 856) Article

C92-142 Analytical Modeling of SH-2F Helicopter Shipboard Operation. Fu-Shang Wei, *Kaman Aerospace Corporation*; Erich Baitis and William Meyers, *David Taylor Research Center* (29, 5, p. 877) Article

C92-143 Viscous Flow Simulation of a Fighter Aircraft. Oh. J. Kwon, *Sverdrup Technology, Inc.*; and Lakshmi N. Sankar, *Georgia Institute of Technology* (29, 5, p. 886) Article based on AIAA Paper 91-0278

C92-144 Experimental Study of Noise Generation and Propagation in a Turbofan Model. S. Lévy and S. Canard-Caruana, *Office National d'Etudes et de Recherches Aérospatiales, France*; and J. Julliard, *Société Nationale d'Etude et de Construction de Moteurs d'Aviation, France* (29, 5, p. 892) Article based on AIAA Paper 90-3950

C92-145 Small Two-Dimensional Surface Excrescences on Aircraft Wings Approaching Separation. Mahmoud A. Alhusein, *Mu'tah University, Jordon*; and David J. Cockrell, *University of Leicester, England, UK* (29, 5, p. 899) Article

C92-146 Wing Mass Formula for Twin Fuselage Aircraft. Sergei V. Udin and William J. Anderson, *University of Michigan* (29, 5, p. 907) Article

C92-147 High Angle-of-Attack Flush Airdata Sensing System. Stephen A. Whitmore and Timothy R. Moes, *NASA Ames Research Center*; and Terry J. Larson, *PRC Systems, Inc.* (29, 5, p. 915) Article based on AIAA Paper 90-0232

C92-148 Application of Computational Fluid Dynamics to Sonic Boom Near- and Mid-Field Prediction. Samson H. Cheung, Thomas A. Edwards and Scott L. Lawrence, *NASA Ames Research Center* (29, 5, p. 920) Article

C92-149 Flight Measurements of Downwash on the Ball-Bartoe Jetwing Powered Lift Aircraft. U. P. Solies, *University of Tennessee Space Institute* (29, 5, p. 927) Article based on AIAA Paper 90-1284 CP904

C92-150 Response of Double-Wall (Sandwich) Circular Plates to Random Excitations—Analytical Approach. Dimitri A. Bofilios, *Integrated Aerospace Sciences Corporation, Greece*; and Constantinos S. Lyrintzis, *San Diego State University* (29, 5, p. 932) Article

C92-151 Multidisciplinary Optimization of Aeroservoelastic Systems Using Reduced-Size Models. Mordechay Karpel, *Technion—Israel Institute of Technology* (29, 5, p. 939) Article

C92-152 Coining of Holes in Aluminum Plates: Finite Element Simulations and Experiments. Rutger Ogeman, *Chalmers University of Technology, Sweden* (29, 5, p. 947) Article

C92-153 Flutter and Stall Response of a Helicopter Blade with Structural Nonlinearity. D. M. Tang and E. H. Dowell, *Duke University* (29, 5, p. 953) Article

C92-154 Improved Calculation of Transonic Potential Flow Past Swept Wings. Lixia Wang and David A. Caughey, *Cornell University* (29, 5, p. 961) Engineering Note

C92-155 Predicting Droplet Impingement on Yawed Wings. Michael B. Bragg, *University of Illinois at Urbana—Champaign*; and Stanley H. Mohler Jr., *Sverdrup Technology* (29, 5, p. 964) Engineering Note

C92-156 Demonstration of Structural Optimization Applied to Wind-Tunnel Model Design. Mark French and Raymond M. Kolonay, *Wright Laboratory, Wright-Patterson AFB* (29, 5, p. 966) Engineering Note

C92-158 Heat Transfer Peculiarities in Supersonic Flows. V. Ya. Borovoy, V. N. Brazhko, G. I. Maikapar, A. S. Skuratov and I. V. Struminskaya, *Central Aerohydrodynamic Institute, Russia* (29, 6, p. 969) Article

C92-159 Longitudinal Stability Analysis of Aerial-Towed Systems. Noriaki Nakagawa and Akira Obata, *Japan Aircraft Manufacturing Company, Ltd., Japan* (29, 6, p. 978) Article

C92-160 Unsteady Simulation of Viscous Flowfield Around F-18 Aircraft at Large Incidence. Yehia M. Rizk, *NASA Ames Research Center*; and Ken Gee, *MCAT Institute* (29, 6, p. 986) Article based on AIAA Paper 91-0020

C92-161 Ground Impingement Noise of Supersonic Jets from Nozzles with Various Exit Geometries. Thomas D. Norum, *NASA Langley Research Center* (29, 6, p. 993) Article based on AIAA Paper 90-4015

C92-162 Mitigation of Pressure Oscillations Induced by Supersonic Flow over Slender Cavities. R. A. Smith, E. Gutmark and K. C. Schadow, *Naval Air Warfare Center* (29, 6, p. 999) Article based on AIAA Paper 90-4019

C92-163 Effects of Fuselage Boundary Layer on Noise Propagation from Advanced Propellers. Peter L. Spence, *Lockheed Engineering and Sciences Company* (29, 6, p. 1005) Article

C92-164 Aerodynamic Design via Optimization. K. D. Lee and S. Eyi, *University of Illinois* (29, 6, p. 1012) Article

C92-165 Aerodynamic Shape Design and Optimization: Status and Trends. George S. Dulikravich, *Pennsylvania State University* (29, 6, p. 1020) Article based on AIAA Paper 91-0476

C92-166 Physical Modeling of Ground Effects on Vortex Wakes. H.-T. Liu, P. A. Hwang and R. A. Srnsky, *QUEST Integrated, Inc.* (29, 6, p. 1027) Article

C92-167 Three-Dimensional Simulation of Electrothermal Deicing Systems. Alan D. Yaslik, Kenneth J. De Witt and Theo G. Keith Jr., *University of Toledo*; and Walter Boronow, *McDonnell Douglas Corporation* (29, 6, p. 1035) Article based on AIAA Paper 91-0267

C92-168 Assessment of Microburst Models for Downdraft Estimation. Dan D. Vicroy, *NASA Langley Research Center* (29, 6, p. 1043) Article based on AIAA Paper 91-2947

C92-169 Numerical Simulation of Re-Entry Flow Around the Space Shuttle with Finite-Rate Chemistry. Yasuhiro Wada, *National Aerospace Laboratory, Japan*; and Hirotoshi Kubota, *University of Tokyo, Japan* (29, 6, p. 1049) Article

C92-170 Numerical Modeling of an Advanced Pneumatic Impulse Ice Protection System for Aircraft. Subramaniam Ramamurthy, Theo G. Keith Jr. and Kenneth J. De Witt, *University of Toledo*; James C. Putt, Charles A. Martin and Kevin L. Leffel, *B. F. Goodrich Aerospace Division* (29, 6, p. 1057) Article based on AIAA Paper 91-0555

C92-171 Compensating Lags in Head-Coupled Displays Using Head Position Prediction and Image Deflection. Richard H. Y. So and Michael J. Griffin, *University of Southampton, England, UK* (29, 6, p. 1064) Article based on AIAA Paper 91-2926

C92-172 Sonic Boom Environment Under a Supersonic Military Operating Area. Kenneth J. Plotkin, Vijay R. Desai, Michael J. Lucas and Carey L. Moulton, *Wyle Laboratories*; and Ruben G. Garza, *Geo-Marine, Inc.* (29, 6, p. 1069) Article based on AIAA Paper 90-4032

C92-173 Spinning Mode Analysis of the Acoustic Field Generated by a Turboshaft Engine. D. Blacodon and S. Lévy, *Office National d'Etudes et de Recherches Aérospatiales, France* (29, 6, p. 1073) Article based on AIAA Paper 90-4012

C92-174 Multigrid Euler Calculations over Complete Aircraft. D. M. Tidd and D. J. Strash, *Analytical Methods, Inc.*; B. Epstein, A. Luntz, A. Nachshon and T. Rubin, *Israel Aircraft Industries, Ltd.* (29, 6, p. 1080) Article based on AIAA Paper 91-3236 CP918

C92-175 Sources of High Alpha Vortex Asymmetry at Zero Sideslip. L. E. Ericsson, *Lockheed Missiles and Space Company, Inc.* (29, 6, p. 1086) Article

C92-176 Wind-Tunnel Investigation of a Fighter Model at High Angles of Attack. Sheshagiri K. Hebbar and David H. Leedy, *Naval Postgraduate School* (29, 6, p. 1091) Article based on AIAA Paper 90-3019 CP908

C92-177 Propeller Slip-Stream Model in Subsonic Linearized Potential Flow. Per Lötstedt, *SAAB Aircraft Division, SAAB-SCANIA, Sweden* (**29**, 6, p. 1098) Article

C92-178 Transonic Low-Reynolds Number Airfoils. Mark Drela, *Massachusetts Institute of Technology* (**29**, 6, p. 1106) Article based on AIAA Paper 91-3337 CP918

C92-179 Optimized Scramjet Integration on a Waverider. Mary Kae L. O'Neill and Mark J. Lewis, *University of Maryland* (**29**, 6, p. 1114) Article based on AIAA Paper 91-1693

C92-180 Unsteady Wind-Tunnel Interference in Aircraft Dynamic Experiments. Martin E. Beyers, *Institute for Aerospace Research, Canada* (**29**, 6, p. 1122) Article based on AIAA Paper 91-0682

C92-181 Acoustic Testing of High-Temperature Panels. J. D. Leatherwood, S. A. Clevenson, C. A. Powell and E. F. Daniels, *NASA Langley Research Center* (**29**, 6, p. 1130) Article based on AIAA Paper 90-3939

C92-182 Buffet Excitation of Wings at Low Speeds. Steven J. Zan, *Institute for Aerospace Research, Canada*; and David J. Maull, *Cambridge University, England, UK* (**29**, 6, p. 1137) Article
